                                                                                                        characterisation, diagnostic or therapeutic use. They can also be used as tissue or mol.wt. markers, for chromosome identification, to identify genetic disorders, to isolate new related DNA, as sources of primers for proteins may also have many biological activities, e.g. cytokine, immunomodulator, haematopojesis regulating activity, tissue growth activity, activin or inhibin activity, chemotactic or chemokinetic activity, haemostatic and thrombolytic activity, receptor/ligand activity, antinflammatory, adherin and tumour invasion suppressor activity, and tumour inhibition activity. The proteins can be expressed in vivo from DNA, introduced in gene therapy vectors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  140
                      specific proteins. Novel cDNA clones (see AAV30916-32) coding for human secreted proteins (see AAW58580-90) are claimed. These can be used for recombinant production of the secreted proteins for analysis,

It was isolated from a human adult brain cDNA library using methods selective for cDNAs that encode secreted proteins. The clone is deposited in composite clone ATCC 98222, an oligonucleotide (see AAT99725) is designed to isolate the clone from the composite. The

The present invention relates to a new method of identifying modulators of Nogo function or BACE activity. The method involves providing Nogo and BACE polypeptides capable of binding with each other, monitoring the interaction between these polypeptides, and determining if the test agent is a modulator of Nogo or BACE activity. The method is useful in treating caute neuronal injuries, such as spinal or head injury, stroke, peripheral nerve damage, and in neoplastic (e.g. glioblastomas, cartenberal nerve damage, and in neoplastic (e.g. glioblastomas, cartenberal nerve damage, and in neoplastic (e.g. glioblastomas, cartenberal nerve damage, modificative or dysproliferative disorders (e.g. carrhosis, psoriasis, keloid formation, fibrocystic conditions, tissue hypertrophy) of the central nervous system. The BACE polypeptide is useful in screening methods to identify agents that may act as modulators of BACE activity and in particular agents that may act as modulators or of BACE activity and in particular agents that may act as modulators or nogo or BACE polypeptides, and the polynucleotide encoding the modulators of Nogo or BACE polypeptides, and the polynucleotide encoding the treatment or prevention of disorders responsive to the modulation of Nogo activity, in alleviating the symptoms or improving the condition of a patient suffering from this disorder, in axon regeneration, or in preventing metastasis or spreading of a cancer. The polynucleotide may also be an essential component in assays, a probe, in recombinant protein synthesis, and in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Identifying modulators of Nogo or BACE activity for treating acute neuronal injuries, neoplastic or dysproliferative disorders, comprises providing and monitoring interaction between Nogo and BACE polypeptides.
                                                                                                                                                                                  Human; Nogo; BACE; acute neuronal injury; spinal injury; head injury; stroke; peripheral nerve damage; neoplastic disorder; glioblastoma; neuroblastoma; hyperproliferative disorder; dysproliferative disorder; cirrhosis; psoriasis; keloid formation; fibrocystic condition; cancer; tissue hypertrophy; central nervous system; axon regeneration; Nogoc; Nogo-associated disease; metastasis; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 1798 BP; 540 A; 314 C; 392 G; 552 T; 0 U; 0 Other;

tuman cDNA clones represented in AAF98374 - AAF98489 encode secreted proteins AAB90667 - AAB90760. The CDNA clones are isolated from various tissue types, and may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate protein expression. The polypeptides and nucleic acids may be used as nutrients or to modulate cytokine and cell proliferation/differentiation activity and may also be involved in modulation of the immune system. The CDNA sequence, proteins, their agonists and/or antagonists exhibit haematopoiesis proteins, their agonists and/or antagonists exhibit haematopoiesis celulating activity; tissue growth activity; activin/inhibit activity; chemotactic/chemokinetic activity, haemostatic and thrombolytic activity; chemotactivity; cadherin/tumour suppressor activity; and/or tumour inhibition activity. Included in the invention are probes represented in AAF98490 - AAF98572 which are specific for the CDNA clones encoding the secreted

The invention relates to 625 polynucleotides which have been derived from a variety of human tissue sources and which encode novel secreted proteins, their complements and sequences that hybridise to them. Also included are a vector comprising the polynucleotide, a host cell. Transformed with the vector, the proteins encoded by the polynucleotides, antibodies that bind to the proteins and identification of modulators of the proteins or the proteins and identification of polynucleotides can be used as probes for the identification and isolation of full length conversion in the proteins can also be used as nutritional supplements. The protein is useful in the treatment of various immune deficiencies and disorders such as viral infections, bacterial infections, fungal infections, autoimmune disorders (e.g. cheumatoid arthritis, multiple sclerosis, autoimmune thyroiditis and diabetes) and allergic reactions and conditions (e.g. asthma). They are also useful for treating neurodegenerative diseases (e.g. Albrimmer's also useful for treating neurodegenerative diseases (e.g. Albrimmer's also useful for treating neurodegenerative diseases (e.g. Albrimmer's also useful for treating neurodegenerative diseases (e.g. Albrimmer's also useful for treating neurodegenerative diseases (e.g. Albrimmer's also useful for treating neurodegenerative diseases (e.g. Albrimmer's also useful for treating neurodegenerative diseases (e.g. Albrimmer's also useful for treating neurodegenerative diseases (e.g. Albrimmer's also useful for treating neurodegenerative diseases (e.g. Albrimmer's also be also and allergic reactions and challergic for the also also also and allergic reactions and enconditions (e.g. asthma).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        disease, Parkinson's disease), liver fibrosis, coagulation disorders (e.g. haemophilia), inflammatory disorders (e.g. Crohn's disease) and tumours. They are also useful for tissue regeneration, for wound healing and in the treatment of burns, incisions and ulcers. The proteins are also useful for regulating haematopoiesis, for treating myeloid or lymphoid cell deficiencies. The present sequence is one of the 625 cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Six hundred and twenty five polynucleotides derived from a variety of human tissue sources which encode secreted proteins, useful for treating immune deficiencies and disorders such as autoimmune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     coagulation disorder; haemophilia; inflammatory disorder; ulcer; tissue regeneration; wound healing; haematopoiesis; myeloid deficiency; lymphoid cell deficiency.

AXD AAD08345-AAD08394 represent CDNAs corresponding to 50 human secreted

CC protein genes and AAE03998-AAE03947 represent the proteins they encode.

CAAE03948-AAE03936 represent human secreted protein fragments or variants.

CC The genes and their secreted proteins are useful for preventing, treating

CC or ameliorating medical conditions, e.g., by protein or gene therapy.

CC pathological conditions can be diagnosed by determining the amount of the

CC new protein in a sample or by determining the presence of mutations in

CC chased on the tissues in which they are most highly expressed, and include

CC developing products for the diagnosis or treatment of proliferative

CC developing products for the diagnosis or treatment of proliferative

CC developing products for the diagnosis or treatment of proliferative

CC developing products for the diagnosis or treatment allacines.

CC developing products for the diagnosis or treatment of proliferation

CC developing products for the diagnosis or treatment of proliferation

CC developing products for the diagnosis or treatment of proliferation

CC developing products for the diagnosis or treatment of proliferation

CC developing products for the diagnosis or treatment of products

CC disorders, schizophrenia, sthem, allergies,

CC disorders, disorders, diadney disorders, disease, Parkinson's disease),

CC cognitive disorders, endocrine disorders, parkinson's disease,

CC programory-related disorders, and cound healing and epithelial cell

CC proclines can also be used to aid wound healing and epithelial cell

CC proliferation, to prevent skin aging due to sunburn, to maintain organs

CC pregenerate tissues, to identify their cognate ligands or binding

CC professed on modify storage properties. Antibodies apporting tora

CC process and in chemotaxis, and can be used as a food additive or

CC process of the invention can be used in alleviating symptomes associated

This invention relates to novel isolated cDNAs that are differentially expressed in MYCN activated cells. Specifically, it refers to proceed the sequences that exhibit differential expression patterns in cells activated by the transactivator MYCN, where MYCN is a protoconcogene that is amplified in neuroblastoma cells and is common in small concogene that is amplified in neuroblastoma cells and is common in small cell lung cancers. The present invention describes these cDNA molecules as useful for in hybridisation assays to detect expression of nucleic acids (or complementary nucleic acids) in a present in a given sample, as used for screening assays by identifying molecules or compounds that compositions at a ligand and modulate function or activity. Accordingly, these compositions exhibit cytostatic activity and can also be used for gene therapy purposes. This polynucleotide sequence is a cDNA that is differentially expressed in MYCN activated cells, given in an exemplification of the invention. NOTE: This sequence does not appear in the printed specification but has been obtained in electronic format from the UN Patent Office at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 475

The invention relates to a method of identifying compounds that influence fat cell number or size comprising providing a cell that expresses a gene and an agent, exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the agent. The method also comprises providing an expression vector and an agent, exposing the cells not expression of the gene crelative to expression of the gene in an expression vector not exposed to the agent, treating a subject with the agent comprises an antisense colligonucleotide. The subject comprises an antisense colligonucleotide. The subject comprises an antisense colligonucleotide. The subject comprises an antisense colligonucleotide are comprises an appropriate or the agent, detecting binding of the agent to the comprises of the agent to the agent of the agent to the agent and identifying fat cell number or size in the comprises an antishody. A method of regulating fat cell number or size comprises providing a subject containing fat cells and an agent that changes the expression of a gene, and treating the subject comprises conditions so that fat cell size or number in the subject is altered. The method is useful for identifying compounds that containing or preventing                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Identifying compounds that influence fat cell number or size for treating or preventing obesity or diabetes by exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the
                                                                                                                                                                                                               Human, gene, 88; fat cell number, fat cell size, obesity, diabetes,
anorectic, antidiabetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 2331 BP; 552 A; 698 C; 649 G; 432 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                human cDNA used in the scope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1; SEQ ID NO 213; 275pp; English.

                                                                                                 ò
                                                                                                                                       원
                                                                                                                                                                                                                  셤
                                                                                                                                                                                                                                                 This invention describes a novel method for the diagnosis of a disease caused by, or associated with, an RNA molecule that has a frameshift mutation. The method is used to diagnose age-related diseases, especially cancer and a wide range of neurodegeneratives (e.g. Alzheimer's disease, Down's syndrome, wyotonic dystrophy, Huntington's disease, and theimer's alsease, Down's syndrome, wyotonic dystrophy, Huntington's disease, and mitiple sclerosis, alcoholic liver disease, diabetes mellitus type II and many others listed) or susceptibility to these disease. The method allows a definitive diagnosis of Alzheimer's disease in living patients, at an early stage. It is based on the observation that disease may be caused by mutations in RNA rather than DNA. The invention describes the used of neuronal system RNA molecules, specifically proteins including beta-amyloid precursor protein (beta-APP), the microtubule associated associated protein 2 (MAP2), neurofilament-L, neurofilament-M, neurofilament-P, resemilin I, presemilin II, glial fibrillary acidic protein (GRAP), the callular tumour antigen p53, B-cell leukemia/lymphoma protein-C (HMGP-C) and neuroendocrine specific protein A. This sequence encodes the wild type and mutant protein fragments represented in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1949

The present invention describes a method (M1) for screening for an antineoplastic agent. The method involves exposing cells to a chemical agent concerning for anti-neoplastic activity, determining a change in expression of at least one gene (1) of a signature gene set, where (1) comprises a sequence (S) selected from 8447 sequences (given in ABL61664 or ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. M1 can be used for screening an inti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of M1, and the data is sufficient to convey the chemical structure and/or properties of the agent. M1 can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, ossophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell carcer, infiltrating lobular cancer, sequamous cell carcinoma, neuroendocrine carcinoma and Wilm's
                                                                                                                                                                                                                                                                                 Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set.
                                                                                                                                                                           Horrigan S;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 3202 BP; 784 A; 891 C; 825 G; 702 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual detained anomal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma-upregulated bNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  soft tissue sarcoma; cytostatic; gene therapy; vaccine; screening; human;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue

The methods are useful for classifying a breast cancer patient according to prognosis. Kits and computer program products are useful for data analysis using the diagnostic, prognostic and statistical methods of the invention. This sequence corresponds to a

This invention describes novel cytostatic polynuclectide and polypeptide sequences which can be used in a method for diagnosing prostatic cancer. Cor the risk of developing prostatic cancer. Diagnosis is based on determining over transcription or over expression of the sequences in prostatic tissue. Screening for inhibitors of the sequences or detection substances involves a binding assay, any compounds that bind are selected optionally after deconvolution of mixtures. Detection of a predetermined minimum level of the reporter indicates the presence of tumour cells. Inhibitors can be chosen from antisense oligonucleotides, short-interfering RNA or ribozymes; an organic molecule of molecular weight below 5000, preferably 300, that binds to the polypeptide; an aptamer against the polypeptide, that binds to the polypeptide; non-human consolvant and tumonised or human; an anti-idotype, non-human (monoclonal) antibody directed against Ab or any of the above derivatised with a reporter group, cell toxin, immunostimulatory molecules and/or cancer by differential expression analysis, using DNA microarrays, between normal and tumorous tissues, with (over) expression being detected by quantitative PCR. Analysis of prostatic cancer samples showed that CD24 was upregulated in many of them. Sections of tissue, isolated from prostatic cancer patients, or subjects at risk, were incubated concernationally with anti-human CD4 murine monoclonal antibodies; between normal and tumorous tissues, with (over) expression being detected sequentially with anti-human CD4 murine monoclonal antibodies; between the diaminobearaidine as colour former (brown). The sequentially but non-malignant cells end, weakly. In 15 of 63 samples were counterstained with hemalum (blue). Malignant cells stained sequenced by much node metaatases were also stained. Delympia and polympetide sequences used in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 3202 BP; 784 A; 891 C; 825 G; 702 T; 0 U; 0 Other;

LysSerAspGluGlyHisProPheArgAlaTyrLeuGluSerGluValAlaIleSerGlu

```
This invention describes novel cytostatic polynucleotide and polypeptide sequences which can be used in a method for diagnosing prostatic cancer or the risk of developing prostatic cancer. Diagnosis is based on determining over transcription or over expression of the sequences in prostatic tissue. Screening for inhibitors of the sequences or detection substances involves a binding assay, any compounds that bind are selected, optionally after deconvolution of mixtures. Detection of a predetermined minimum level of the reporter indicates the presence of tumour cells. Inhibitors can be chosen from antisense oligonucleotides, short-interfering RNA or ribozymes; an organic molecule of molecular weight below 5000, preferably 300, that binds to the polypeptide; an aptamer against the polypeptide; a (monoclonal) antibody directed against Ab or any of the above derivatised (monoclonal) antibody directed against Ab or any of the above derivatised with a reporter group, cell toxin, immunostimulatory molecules and/or cancer by differential expression analysis, using DNA microarrays, between normal and tumorous tissues, with (over) expression being detected by quantitative PCR. Analysis of prostatic cancer samples showed that CD24 was upregulated in many of them. Sections of tissue, isolated from prostatic cancer patients, or subjects at risk, were incubated cancer patients, or subjects at risk, were incubated second antibody; streptavidin-conjugated horseradish percoxidase and then diaminobenzidine as colour former (brown). The samples were counterstained with hemalum (blue). Malignant cells stained strongly but non-malignant cells only weakly. In 15 of 51 samples of defence of adenocarcinoma, membrane and cytoplasmic staining was very strong, and lymph node metastases were also stained. ADR65805-ADR65954 represent the incubated and polypeptide sequences used in the method of the
                                                                                                                               Pilarsky C, Specht T;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic

The invention relates to a nucleic acid comprising at least 18 bases from a segment of the chemically pretreated DNA of genes associated with metastasis, i.e. any of ADS99709-ADS99306 human genomic sequences or any of the 19 sequences or any of the 19 sequences or any of the 19 sequences or any of the 19 sequences of SEQ ID 1,3,5 etc. Also included are an oligomer or peptide nucleic acid) comprising at least one base sequence of at least 9 bases which hybridises to (or is identical with) the sequence referred to above, producing an array of the oligomers on a carrier, obtaining genetic and/or epigenetic the oligomers on a carrier, obtaining genetic and/or epigenetic contents for diagnosis and/or therapy of diseases (or predisposition to them) by analysis of cytosine methylation and a kit comprising a pisulphite (disulphite or hydrogen sulphite) and the oligomers. In the method of above -bumethylated cytosines, then fragments of the converted chemically to uracii, or another base with hybridisation to the oligomers and a polymerase (preferably heat stable) to produce converted chemically to uracii, or another base with hybridisation to the oligomers and a polymerase (preferably heat stable) to produce the oligomers and a polymerase (preferably heat stable) to produce the oligomers and any hybridisation detected. The amplicons are labelled with fluorescent or radioactive markers, or with a detachable mass marker to allow their detection by mass spectrometry, specifically using the cimprove detection in the mass spectrometry, specifically using the complementary to (or identical with) parts of the nucleic acids listed above may be used as primers for amplification of the nucleic acids listed above may be used as primers for amplification of the nucleic acids listed above may be used as primers for amplification of the nucleic acids listed above may be used as primers for amplification of the nucleic acids listed above may be diseases associated with methylation of Coc determining very mass acondition of the nuclei
                                                                                                                                                                                                                                                                                                                                                                                                                                useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    present sequence is human gene fragment or cDNA associated with metastasis. Note: The sequence was not displayed in the specification but

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        42
                                                                                                                                    The present invention relates to nucleotide sequences which are useful the screening of compounds for the treatment of pain, or for the diagnosis of pain. The nucleotide sequences are up-regulated in the spinal cord in response to streptozocin-induced diabetes. The present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a method of identifying compounds that influence fat cell number or size comprising providing a cell that expresses a gene and an agent, exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the agent. The method also comprises providing an expression vector and an agent, exposing the vector to the agent, detecting a change in expression of the gene relative to expression of the gene in an expression vector not exposed to the agent, treating a subject with the agent and identifying fat cell number or size in the subject comprises an ammal, preferably a human. The coligonucleotide. The subject comprises a mammal, preferably a human. The method also comprises providing a polypeptide and an agent, exposing the polypeptide to the agent, detecting binding of the agent to the collypeptide or a change in an activity of the polypeptide, treating a subject or a change in an activity of the polypeptide, treating a subject with the agent comprises an antibody. A method of regulating fat cell subject with the agent under conditions so that fat cell number or size in the subject of saltered. The method is useful for identifying compounds that influence fat cell number or size, for preparing a composition for treating or preventing obesity or diabetes. This sequence represents mouse cDNA used in the scope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identifying compounds that influence fat cell number or size for treating or preventing obesity or diabetes by exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   42

Rattus norvegicus

EP1284297-A2 19-FEB-2003.

C1-13 protein neuronal-specific gene SEQ ID NO:128.

```
cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 15112 nucleotide sequences, appearing as ABX34836-ABX49347, or complements of them. Also included are i, (1) a transformed cell having a nucleic acid comprising an LMFD nucleic acid allowed as a promoter and a 3, non- translated sequence that functions in the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and cell polyadenylated ribonucleotides to a 3' end of the manner of polyadenylated ribonucleotides to a 3' end of the manner of comprising of the 15112 nucleic acid sequences or its complement cell or tissue comprementary nucleic acid molecule obtained from the bovine cell or tissue, where hybridisation between the marker nucleic acid and the complementary nucleic acid permits the detection of the molecule; and (b) detecting the level or pattern of the complementary nucleic acid is predictive of the captementary nucleic acid is predictive of the capterning a level or pattern of the molecule in a bovine cell or tissue. CC tissue the detection of the molecule in a bovine cell or tissue. CC tissue are in sequence is one of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is predictive of the complementary nucleic acid is nucleic acid is used for constructive for use in cattle gene expression, or reach and an analysis, cattle constr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  present sequence was not shown in the specification but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     electronic format from the USPTO web site:

regulated in the spinal cord in response to streptozocin-induced diabetes, or comprising, hybridising or having at least 80% sequence identity to a sequence whose expression products are kinases, phosphatases, ion channel proteins, receptors, transporters, G-protein coupled receptor proteins, DNA-binding proteins, proteases or enzymes, given in the specification. A gene of the invention has analgesic activity, and may have use in gene therapy. The gene sequences, vector, host cell, animal, polypeptide and antibody are useful for screening of compounds for diagnosing or treating pain. The kits are useful for simultaneous, separate or sequential detecting and/or quantifying downregulation of a gene sequence in the spinal cord of a mammal in response to streptozocin-induced diabetes. The compound or pharmaceutical composition is useful as a medicament for treating or diagnosing pain. The present sequence represents a gene of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              266 GCTGCCCTCTCTGCCACCATCAGCTTCCGCATCTACAAGTCCGTTCTACAAGCTGTGCAG 325

(I) can have cytostatic, immunomodulatory and neuroprotective activities, and can be used in gene therapy. (I) and proteins (II) encoded by then are used in high throughput screening assays to select DNA molecules, RNA molecules, peptide nucleic acids, mimetics, peptides, proteins, agonists, antagonists, antibodies or their fragments, immunosjobulins, inhibitors, drug compounds and pharmaceutical agents. Expression of (I) in a sample infocates the differentiation of embryonic stem cells into a tissue selected from brain, heart, kidney, liver, lung, skeletal muscle or pancreatic tissues. (I) and (II) are used

to produce an expression profile that defines a metabolic or developmental process, treatment, condition, disease or disorder. The gene profile can be used for diagnosis, prognosis or monitoring of treatments and for investigating a predisposition to a disorder where the gene is associated with a cancer, immunopathology or neuropathology
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       102

```
The invention relates to a purified nucleic acid molecule associated with lactation or muscle and fat deposition (designated LMFD), derived from cattle, and the LMFD nucleic acid can specifically hybridise to a second nucleic acid molecule comprising any of 15112 nucleotide sequences, appearing as ABX34836-ABX4937, or complements of them. Also included are (1) a transformed cell having a nucleic acid comprising an LMFD nucleic acid linked to a promoter and a 3' non- translated sequence that functions in the cell to cause termination of transcription and addition of polyadenylated ribonucleotides to a 3' end of the mRNA molecule; and (2) determining a level or pattern of a molecule in a bovine cell or tissue comprising; (a) incubating a marker nucleic acid (comprising any of the 15112 nucleic acid sequences or its complement or fragment) with a complementary nucleic acid sequences or its complement or fragment) with a complementary nucleic acid permits the detection of the molecule; and (b) detecting the level or pattern of the complementary nucleic acid permits the detection of the molecule. The LMFD nucleic acid is used for the detection of the complementary nucleic acid permits the detection of the sold or pattern of the complementary nucleic acid permits the detection of the complementary nucleic acid is predictive of the complementary nucleic acid permits the detection of the molecule. The LMFD nucleic acid is used for the detection of the molecule. The LMFD nucleic acid is used for the substance in a povine cell or the complementary nucleic acid sequence in cattle gene expression, or for genetically improving cattle. The present sequence is one of the selection of the molecule of sequence tell or the sequence as not shown in the specification but was obtained in constant from the USPTO web site:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New nucleic acid associated with lactation, and muscle and fat deposition, useful for genome mapping, gene identification and analysis, cattle breeding, or for genetically improving cattle.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 422 BP; 99 A; 85 C; 96 G; 142 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 segdata.uspto.gov/sequence.html?DocID=20020137139

```
This invention relates to novel, isolated full length human cDNA molecules and the encoded proteins thereof. Specifically, it refers to cDNA clones obtained by an oligo-capping method, where none of these clones are identical to any known human mRNAs. The present invention describes an immunoassay to identify agonists and antagonists, as well as antibodies, antisense molecules and siRNAs that can all be used to bind antibodies, antisense molecules and siRNAs that can all be used to bind molecules are useful for diagnostic markers or therapeutic targets for the various diseases or morbid states. In particular, they are useful in gene therapy for treating osteoporoais, neurological disease, Alzheimer's disease, Parkinson's disease, dementia, short memory and various cancers, as well as for maintaining equilibrium of sense or motor function, and for treating emotional reaction, fear response and panic. Accordingly,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New 1995 cDNA, useful for treating osteoporosis, neurological diseases, Alzheimer's diseases, Parkinson's diseases, dementia and various cancers.

                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence represents the coding sequence of human cDNA clone HP02061 which encodes a 26 kD protein with two putative transmembrane domains. The cDNA was isolated from a Saos-2 (human osteosarcoma cell line) cDNA library. The protein has homology with the human neuroendocrine specific protein C (PIR Accession No. 160904), and may have a similar function. The protein may be used to raise specific antibodies, as assay reagents, as diagnostic tissue markers, for the isolation of cognate receptors, ligands and binding proteins, and as biologically active agents Nucleotides encoding the protein may be used as primers and probes or antisense molecules, and in gene therapy. Cells transformed with these nucleotides may be used to screen for agonists and antagonists which are potentially useful therapeutically

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to an isolated polypeptide having BACE1 activity. The protein is RTN4 or RTN3 protein. The polypeptide is useful in preparing a composition for treating amyloidosis or Alzheimer's disease. This sequence corresponds to the RTN-3 gene.

                                                          엄
                                                                                                                      AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used into a host cell and culturing the cell to express the proteins. Or an be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the present invention. N and persent pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     476
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                716
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       160

The invention relates to secreted proteins (AAY17219-228) encoded by polynucleotides obtained from human fetal kidney, adult lung, adult blood, adult testes, and fetal brain and murine adult borain, adult blood, adult testes, and fetal brain and murine adult bone marrow cDNA libraries. The secretd protein nucleic acid sequences (X6801-811) correspond to clones bd306-7, gj283-6, fK317-3, K213-2x, na316-1, nf93-20, np164-1, pe204-1, yal-1 and yb-1, (all clones are deposited as ATCC 98599); The PNS and proteins are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, cytokine and cell proliferation/differentiation activity, immune stimulating (e.g. as vaccines) or suppressing activity, hematopoiesis regulating activity, tissue growth activity, activin/ thrombolytic activity, receptor/ligand activity, and tumour activity, cadherin/cumour invasion suppressor activity, and tumour inhibition activity. The PNS are also stated to be useful for gene

The invention relates to novel human secreted proteins, the nucleic acids encoding them. The protein may exhibit cytokine, cell proliferation or cell differentiation activity or may induce production of other cytokines in certain cell populations and may exhibit immune stimulating or immune coupressing activity, which is useful for the treatment of various immune configurations and disorders e.g. severe combined immunodeficiency (SCID), autoimmune disorders e.g. multiple sclerosis, systemic lupus cerythematosus, rhemmatoid arthritis, autoimmune pulmonary inflammation. The proteins are also useful in the treatment of diseases and disorders including tissue, skin and organ transplantation and in graft-versus-host diseases (QHHD), in the induction of tumour immunity, myeloid or lymphoid cell deficiencies, wound healing and tissue repair, in the treatment of burns, incisions and ulcers; as well as in treatment of periodontal disease, osteoporosis or osteoarthritis, mediated by inflammatory concesses, diseases of the peripheral nervous system. Alzheimer's, cell results and Shy-Drager syndrome, infections, infarction of cardiac and cisease, ulcers, bone regeneration. The protein, having activin- or inhibin related activities in well as a contraceptive based on the ability of inhibins to decrease fertility in female mammals and decrease contractogenesis in male mammals. The proteins and uncerted activities and mammals and nucleic acids are also contractogenesis.
                                                                                                                                                                               Clark H;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 40

EVANS C. MERBERG D. TREACY M.

The invention relates to isolated polymucleotides (ABA90876-ABA90968 and ABA9080) and encoded proteins (ABB55698-ABB5800), especially proteins (ABB51698-ABB5800), especially and encoded proteins (ABB55698-ABB5800), especially proteins SEQ ID NO 19 (ABB9085) and proteins SEQ ID NO 19 (ABB95707) contained in proteins bd306-7 and yb8-1 respectively and the clones bd306-7 and yb8-1 care deposited with the American Type Culture Collection (ATCC) with accession number 98599. The polymucleotides and encoded polypeptides have cycostatic, anti-inflammatory, immunomodulator, vulnerary, cartivin, inhibin, chemotactic, hAemostatic, thrombolytic and anti-inflammatory activity and acting as cytokine modulators, candearin suppressors. The polypeptides and polymucleotides are useful in gene therapies, particularly for preventing, treating or ameliorating any of the following diseases: immune deficiency and disorders; e.g. bacterial cor fungal infections, autoimmune disorders, cancer, systemic lupus cytoescarthritis; central and peripheral nervous system diseases and coercostencies; wound, burns, incisions and ulcers, osteoporosis or costeoarthritis; central and peripheral nervous system diseases and disease, amyotrophic lateral solerosis or Staft contral and peripheral contral and peripheral contral and peripheral contral and peripheral contral and peripheral contral and peripheral contral and peripheral contral and peripheral contral and peripheral contral and peripheral contral and peripheral contral and co disease; or tumours or cancers, pemphigus vulgaris or pemphigus foliaceus New secreted proteins and encoding polynucleotides, useful in gene therapies, particularly for preventing or treating autoimmune disorders, cancer, graft-versus-host disease, wound, osteoporosis, stroke or endotoxin lethality, arthritis, inflammatory bowel disease or Crohn's Collins-Racie LA, Evans C; Steininger RJ, Spaulding V; Sequence 1656 BP; 473 A; 389 C; 340 G; 454 T; 0 U; 0 Other; Collins-Racie LA, Claim 13; Page 191-192; 349pp; English. strong 1 cells. The proteins can exhibit cytokine, cell proliferation, or strong 1 cells. The proteins can exhibit cytokine, cell proliferation, or cell differentiation activity (either inducing or inhibiting). They can be used to support colony forming cells or factor-dependent cell lines, to regulate hematopoiesis, and to treat myeloid or lymphoid cell lines, celliciencies. In addition, they may be used to support the growth and proliferation of erythroid progenitor cells, and to treat various anemias. They can have colony stimulating factor (CSF) activity and can be used to support the growth and proliferation of megakaryocytes granulocytes, monocytes or macrophages, to prevent or treat myelosuppression, to support the growth and proliferation of megakaryocytes and platelets, thereby allowing prevention or treatment of platelet disorders such as thrombocytopenia, to support the growth and proliferation with platelet transfusions, to treat stem cell disorders conjunction with platelet transfusions, to treat stem cell disorders, conjunction with platelet transfusions, to treat stem cell disorders, conjunction with platelet conformal hemoglobinuria, or to repopulate the stem cell compartment after irradiation or chemotherapy. They can be used for growth or differentiation of bone, cartilage, tendon, ligament, or nerve tissue, as well as for wound healing and transfusions the presented the platement, and in the treatment of burnary in construction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           and ulcers, to induce cartilage and/or bone growth in circumstances where bone is not normally formed and thus have an application in healing bone fractures and cartilage damage or defects, prophylactic use in fracture reduction and also in the improved fixation of artificial joints
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            416

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This sequence represents the human cDNA clone HP02061 which encodes a 26 from a Saos 2 (human osteosarcoma cell line) cDNA library. The cDNA was isolated from a Saos 2 (human osteosarcoma cell line) cDNA library. The protein has homology with the human neuroendocrine-specific protein C (PIR Accession No. 160904), and may have a similar function. The protein may be used to raise specific antibodies, as assay reagents, as diagnostic tissue markers, for the isolation of cognate receptors, ligands and binding protein may be used as primers and probes or antisense molecules, and in gene therapy. Cells transformed with these nucleotides may be used to screen for agonists and antagonists which are potentially useful

```

New isolated human genes and the secreted polypeptide(s) they encode useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders.

Claim 1; Page 473-474; 721pp; English.

This sequence represents a nucleic acid molecule designated Gene 92 from the human cDNA clone HAUBL57 (deposited as clone ATCC 97897 and ATCC 209043) which encodes a secreted human protein. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin protein as compared to the human protein only. The invention relates to compared to the human protein only. The invention relates to compared to the human protein only. The invention relates to les novel genes and their fragments (nucleic acid sequences: AAV59511-075912, amino acid sequences AAW7471-W75026) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the presence of mutations in the new polymucleotides.

Specific uses are described for each of the 186 polymucleotides, based on which tissues they are most highly expressed in (see AAV59511 for .

Sequence 1766 BP; 463 A; 437 C; 383 G; 481 T; 0 U; 2 Other;

The invention relates to an isolated protein that is one of 186 human secreted proteins, given in the specification, encoded by one of 309 cDNA sequences also given in the specification, encoded by one of 309 cDNA sequences also given in the specification, encoded by one of 309 cDNA parmaceutical composition used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. Disorders which are diagnosed or treated include disorders e.g. neoplasms of the breast or liver, cardiovascular disorders of sorders e.g. nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to collurate or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present sequence represents a obbA derived from a gene encoding one of the novel human secreted broteins of the invention. Note: This sequence did not form part of the printed specification, but was conditions and also a processed to the condition of the condition of the processed the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the c

```

The present invention relates to the isolation of novel human secreted proteins and the polynucleotide sequences encoding them. The invention

Claim 4; SEQ ID NO 254; 260pp; English.

ADI22969 standard; cDNA; 1766 BP.

ADI22969

```
also discloses vectors, host cells, antibodies, and recombinant methods for producing human secreted proteins. The polypeptide and polymucleotide sequences for the secreted proteins are useful for preventing, treating, ameliorating or diagnosing medical conditions such as hyperproliferative disorders (e.g. leukaemia or breast cancers), wounds, reproductive disorders (e.g. haemophilia or thrombocytopaenia), immunodeficiencies (e.g. haemophilia or thymic hypoplasia), autoimmune disorders (e.g. wiskott-Aldrich syndrome or thymic hypoplasia), autoimmune disorders (e.g. wiskott-Aldrich syndrome or thymic hypoplasia), autoimmune disorders (e.g. wiskott-Aldrich syndrome or thymic hypoplasia), autoimmune disorders (e.g. wiskott-Aldrich syndrome or thymic hypoplasia), cartainators (e.g. wind) infections (e.g. wind) or sepsis), respiratory disorders (e.g. kidney failure), cardiovascular disorders (e.g. angina pectoris, cerebral ischaemia or congenital heart defects), respiratory parkinson's disease), and inflammations (e.g. Alzheimer's disease). The polymorphide may also be used as vaccine adjuvants.

ACDB2641-ACDB2950 encode human secreted proteins or their fragments.

Note: The sequence date for this patent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         646
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      121 LeuMetTrpValPheThrTyrValGlyAlaLeuPheAsnGlyLeuThrLeuLeuIeLeu 140

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              706
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        80
                                                                                                                                                                                                                                                              The invention describes an isolated nucleic acid comprising a sequence having 95 % identity with: a polynucleotide fragment of a sequence not given in the specification, or its allelic variant; a polynucleotide fragment of the CDNA sequence; a polynucleotide sequence encoding polympeptide, or its fragment, domain, epitope or species homologue, or apolympetide, or its fragment domain, epitope or species homologue, or polynucleotide that hybridises under stringent conditions to any one of the sequences of (a)-(c). The nucleic acid is useful for preparing a medicament for diagnosing, preventing, treating or ameliorating a medicament for diagnosing, preventing, treating or ameliorating a medicament for the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ServalvalAspleuLeuTyrTrpArgAsplleLysLysThrGlyvalvalPheGlyAla

                                                                             ઠ
                             The invention relates to isolated nucleic acid molecules and the human secreted proteins (SPs) they encode. The proteins and nucleic acids may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate SP expression e-g. cancer, haematopoietic disorders, diseases of the immune system, inflammatory and ordinary others. Full details of disorders that may be prevented, diagnosed and/or treated by the above methods are given in the proteins. The nucleic acid molecules may be used to produce their or proteins. The nucleic acid and it's complementary sequences may also be used as DNA probes in diagnostic assays to detect and quantitate the proteins. The nucleic acid in samples, and therefore which parients may be in need of restorative therapy. The SPs may also be used to presence of similar nucleic acids in samples, and therefore which parients may be in need of restorative therapy. The SPs may also be used to assays to identify modulators of SP expression and activity. The anti-SP antibodies and antagonists may also be used to down regulate expression and activity. The anti-SP antibodies may also be used as diagnostic agents for detecting the presence of the proteins in samples (e.g. by enzyme linked immunosorbant assay (ELISA)). The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 466

The present invention relates to a method for diagnosing, or evaluating progression of, a neuromuscular disease. The method comprises detecting modulation of the expression of a product (1) of the RTM (reticulon)3 gene. Differential expression of RTM3 is a specific marker of neuromuscular disease, allowing early diagnosis from readily available muscle biopsies. The method is also useful for determining the efficacy of treatment. The method is also useful for determining the efficacy of treatment. The method is used to diagnose (also to evaluate progression or therapy of) neuromuscular disorders, specifically amountorphic lateral sclerosis (Abs) and myopathy. Also (i) antibodies specific for isoforms of RTM3 or oligonucleotides (antisense sequences or small interfering RMA) that can block/reduce expression of these isoforms express RTM3 are useful in screening for therapeutic agents. The present sequence is a RTM3 DNA sequence used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Diagnosing, prognosing and monitoring neuromuscular disease, particularly amyotrophic lateral sclerosis, comprises detecting modulation of the reticulon 3 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Neuroprotective; Myotropic; neuromuscular disease; RTN3; reticulon 3; amyotrophic lateral sclerosis; ALS; myopathy; human; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          De Tapia M, Larmet Y, Loeffler J;

Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and sequences ABB10981-ABB12330 represent nucleic acids encoding them. The invention also relates to vectors and recombinant host cells comprising a nucleotide of the invention, methods of producing the nucleotides cathibodies against the polypeptides, methods of deetecting the nucleotides or polypeptides against the polypeptides of the invention have homology to known proteins, thereby compounds which bind to polypeptides of the invention have homology to known proteins, thereby giving an insight into their probable biological activities, and hence complemental therapeutic applications. The polypeptides of the invention may have various activities including cytokine, cell proliferation or cell differentiation activities; nem cell growth factor activity; immunomodulatory activity; activity itsus growth activity; immunomodulatory activity; activity risus growth activity; immunomodulatory activity; activity risus growth activity; immunomodulatory activity; activity or light activities; or may be involved in oncogenesis, cancer cell proliferation or metaetasis.

Cohemotactic or chemokinetic activities; haemostatic, thrombotic or thromboty activities; preceptor or light activities; or may be involved in oncogenesis, cancer cell proliferation or metaetasis.

Conditions, e.g., by protein or gene therapy. Such conditions include cancers, headatopoietic disorders (e.g., metaetoid cell disorders) (conditions, e.g., by protein or gene therapy. Such conditions, e.g., by protein or gene therapy. Such conditions include and exercises, headatopoietic disorders (e.g., metaetoid cell growth. Polypeptides encoding them) may be used to promoce wound healing (e.g., of burns, incisions and ulcers), while those with care cell growth factor activity may be used in the treatment of viral, cancers land fungal infections in addition to immune diseases or accidental damage or properties and bused in culting the present sequence represents a collection of the above cond

Included in the invention are primers AAF93917 - AAF94295 and AAF62235 which are used to isolate the cDNA sequences of the invention. The invention also includes methods for the production of antibodies directed against the proteins, and cDNA sequences, which can be used in vaccines. The polynucleotide sequences can be used in gene

therapy. The polynucleotide sequences and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate secretory protein/membrane protein expression. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples. They may also be used to study the expression and function of secretory proteins/membrane polypeptides and their role in metabolism. The polypeptides may be used as antigens in the production of antibodies antagonists) of expression and activity. The antibodies and antagonists may also be used as therapeutic agents to down regulate expression and activity. The antibodies may also be used as therapeutic agents to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of the polypeptides in samples (e.g. by enzyme linked immunosorbant assay (ELISA). Examples of diseases which may be treated include rheumatoid arthritis and diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  335

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to human neuroencorine specific protein linked gene, hNSPL1, highly expressed in human nerve system. The protein is located in the endoplasmic reticulum membrane of cell, is highly expressed in normal nerve cell and has obvious difference in expression inside glia cell and inside glia cell tumour. It may have important some nerve system disease occurrence. The present sequence represents human neuroencocrine specific protein linked gene, hNSPL1, cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               IleGlnLysSerAspGluGlyHisProPheArgAlaTyrLeuGluSerGluValAlaIle 80
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gene NSPL1 with expression difference in human normal neuroglia cell and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 SerValValAspLeuLeuTyrTrpArgAspIleLysLysThrGlyValValPheGlyAla

```
This sequence represents a nucleic acid molecule designated Gene 92 from the human cDNA clone HAUBLS7 (deposited as clone ATCC 97897 and ATCC 209043) which encodes a secreted human protein. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin C portion (e.g. AAV59502) for increasing the stability of the fused CC protein as compared to the human protein only. The invention relates to 186 novel genes and their fragments (nucleic acid sequences: AAV59511-C V58812; amino acid sequences AAW7731-W75026) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein cor gene therapy. Also, pathological conditions can be diagnosed by determining the presence of mutations in the new polynucleotides.

Specific uses are described for each of the 186 polynucleotides, based on which tissues they are most highly expressed in (see AAV59511 for

                                                                                                                                                                                                                                                                                                                               셤
                                                                                                                                                                                                                                                                                                                                                                                                                     disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to cuburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present sequence represents a cDNA derived from a gene encoding one of the novel human secreted proteins of the invention. Note: This sequence did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                      The invention relates to an isolated protein that is one of 186 human secreted proteins, given in the specification, encoded by one of 309 cDNA sequences also given in the specification. The protein is used in a pharmaceutical composition used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. Disorders which are diagnosed or treated include
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     441
